If you use Fedora, you will soon be able to install [supernova](#) via a Fedora package ! The [packages are currently in the testing repositories](#) but they will soon be available in the stable repositories for Fedora 22, 23, and rawhide.

## Want it right now ?

If you want to install supernova now, simply tell dnf to install it from the updates-testing repository :

```
| dnf install --enablerepo=updates-testing supernova
```

## supernova in EPEL

A few people have asked for supernova to be added to [EPEL](#) , but the version of the [click](#) module for python is too old. Getting supernova into EPEL isn't completely off the table, but it will require some additional work.

Many thanks to [Pete](#) and Carl for helping me with the package review and bug fixes.
