This post is just for my own notes. I'm buying a new car (arrives in October) and I need to gather up notes on how to hack it.

To start with is the generic car hacking information. One good source I found is the [Car Hacker's Handbook](#) , which has a good explanation of the basics.

Another good start is the various papers produced by Charlie Miller and Chris Valasek, such as their early work and their latest Jeep hack. [\[1\]](#) [\[2\]](#)

Specifically to my car, a Tesla, there is this site that documents all the [undocumented](#) bits about the car, such as listing the [56 CPUs](#) found in the car.

Specifically, there is the work by Kevin Mahaffey and Marc Rogers covering their [Tesla hacking](#) . I hate them, because they've already done some of the obvious things I would've tried first, such as popping up an X Window on the display.

Anyway, this post is for my own benefit, so when I lose my notes, I can find them again by googling. Maybe other people in similar situation might find it a bit useful, too.
