[UPDATE 2015 12 13]

How about if you could control your entire home temperature and hot water/central heating etc etc, through your smartphone over the internet ?

You are going to think that this is a dangerous **IoT** (Internet of Thing) that exposes your privacy to unknown attackers and your smart home is going to be under the control of an evil company.

What if I could tell you, that you can build your own smart controller with open-design/open hardware & free software that costs about **Euros100** ?

Crazy, right ?

Actually there is a project that does exactly all the above and much more and it's based on a **Raspberry Pi**.

Let me introduce you to [HestiaPi](#) .

<http://www.hestiapi.com>" targe...

[PNG - 88.2Â kio]

The name comes from the greek word : [ἥστιά](#) and everything you need to start with, have already been published by the core developer on their site.

The team behind this awesome project will host/run an open/free entrance two day [Hackathon](#) at [Athens Hackerspace](#) on 2016.
