How To Boot An ISO With GRUB2 (The Easy Way !)

If you want to try out a new Linux distro, be it the latest Ubuntu 11.04 Natty Narwhal daily ISO or any other (I've only tested it with Ubuntu though !) and don't want to burn a CD each time you want to try a new daily build (and you don't have an USB memory stick around), **you can use a cool GRUB 2 feature that lets you boot a live CD ISO directly from your hard disk**. You can also use this method to boot various utilities such as Super Grub Disk, SystemRescueCD, Parted Magic and so on.

Usually, setting up GRUB 2 to boot an ISO can be quite a difficult [process](#) (well, not that difficult but for some reason it always failed for me) but you can do this with just a few clicks thanks to Unetbootin.

Install Unetbootin and set everything up for booting an ISO using Grub2

1. Install Unetbootin :

In Ubuntu, simply run the following command to install it : `sudo apt-get install unetbootin`

If you're not using Ubuntu and Unetbootin is not in your distro official repositories, download it from [HERE](#).

2. Using Unetbootin to create a new Grub2 entry to boot the ISO :

In Unetbootin, select the "Diskimage" option, then browse for an ISO and under "Type" select "Hard Disk" and leave "/" for the "Drive", then click OK :

[Unetbootin boot Grub2 ISO](#)

Once Unetbootin finishes, restart your computer and select "Unetbootin" in the GRUB2 menu. If the Grub2 menu doesn't show up, press and hold the **SHIFT** key.

Because Unetbootin extracts the ISO, you'll have to run it again when you want to boot a new ISO, even if it has the same name and is placed in the same location as the old one.

Removing the ISO from GRUB2 menu

[Unetbootin remove ISO grub2](#)

The next time you'll launch Unetbootin, it will ask you the following : "Unetbootin is currently installed. Remove the existing version ?" - this isn't about removing Unetbootin but about removing the Grub2 menu entry for Unetbootin (and the ISO). Select "OK" and the ISO will be removed from the menu.

Many thanks to [Usemos Linux](#) for the heads up !
