[wifi.jpg](#) Looking for public Wi-Fi in your town or city ? The hunt may be about to get easier : the Federal Communications Commission is reportedly considering the development of free and public "super Wi-Fi" networks across the United States.

The proposal, first reported by [The Washington Post](#), would require local television stations and broadcasters to sell wireless spectrum to the government. The government would then use that spectrum to build public Wi-Fi networks.

The public networks would be much stronger than average by virtue of the spectrum used to build them – their signal would hypothetically travel for long distances and penetrate thick walls and other objects.
